Eli Goldratt is known by millions of readers worldwide as a scientist, educator and business guru. His Theory of Constraints (TOC) is taught at business schools and MBA programs around the globe. Government agencies and businesses, large and small, have adopted his methodologies. TOC has been successfully applied in almost every area of human endeavor, from industry to healthcare to education. And while Eli Goldratt is indeed a scientist, an educator and a business leader, he is first and foremost a philosopher; some say a genius. He is a thinker who provokes others to do the same. In *The Choice*, Goldratt once again presents his thought-provoking approach, this time through a conversation with his daughter, Efrat, as they discuss his fundamental system of beliefs. Through examples and discussions, Eli Goldratt helps us understand, holistically, how the interrelation of emotions, intuition and logic influences our ability to think clearly and problem solve when making personal and professional decisions. Can every conflict be removed? Is every situation exceedingly simple? (no matter how complex it initially looks) Can every situation be substantially improved? Is there always a win-win solution? Dr. Goldratt exhorts his readers to examine and reassess their lives and business practices by cultivating a different perspective and a clear new vision. This revised edition includes Efrat's Notes - these notes and logical maps are helpful tools that assist in visualizing and implementing the thoughts and ideas expressed throughout this book.

Step by step to self-sewn men's clothing. You quickly learn to sew - but tailoring requires passion, dedication and perseverance. Similar to learning an instrument, dexterity and an eye for the essentials must be trained. The step-by-step instructions in this book with numerous photos and drawings lead safely to the finished garment. Detailed explanations ensure that you always have an overview and that the individual working steps are carried out in the correct order; different processing variants leave room for individuality. Absolute beginners may need a little more patience than experienced - but with the tips and tricks provided by master tailor Sven Jungclaus and a little practice, the first successes can be achieved quickly. Those who proudly hold the self-sewn piece in their hands, easily find the courage for further tailoring projects.

It was the closest we ever came to unleashing the Third World War.... The image of that world was so horrible to contemplate that both sides stepped away from that precipice and opted for peace. Fires of October is the exhilarating military history of the Cuban Missile Crisis exploring in detail the strategic plans implemented by American Armed Forces as they headed towards a catastrophic nuclear collision with Cuba and the USSR. Using recently declassified material, Blaine Pardoe systematically recounts the origins of the crisis, from the Berlin Crisis of 1961 and Cuba's military metamorphosis, to the internal disorganization of the US military, which exacerbated tensions between the USA, Cuba, and the USSR. Pardoe reveals that the invasion plans were based on old intelligence, outdated maps, and misconceptions about the size, strength, and composition of the Soviet forces in Cuba; for the first time, and with harrowing results, he scrutinizes the potential fallout had the invasion gone ahead. Gripping and unnerving, Fires of October shows us just how close the world came to nuclear war.

Do you often feel you are at the mercy of external forces in your life? If so, this book is for you. *Playing the Quantum Field* demonstrates that you have the power to shape your own life, showing how your very next choice can change struggle into play. Brenda Anderson presents a fresh approach to everyday life based on the premise that everyone and everything in the universe are interconnected, and she shows you how to play the quantum field to create success and joy at home or on the job. She posits that the old rules no longer apply and presents a new set of rules, which include ten energetic choices you can make to take control of your life and move into what she calls the Power Zone. Once you grasp how easy it is to move among the choices along the energy spectrum, each day will become a dynamic, empowering exploration of the unlimited potential of the Field.

The marvellous complexity of the Universe emerges from several deep laws and a handful of fundamental constants that fix its shape, scale, and destiny. There is a deep structure to the world which at the same time is simple, elegant, and beautiful. Where did these laws and these constants come from? And why are the laws so fruitful when written in the language of mathematics? Peter Atkins considers the minimum effort needed to equip the Universe with its laws and its constants. He explores the origin of the conservation of energy, of electromagnetism, of classical and quantum mechanics, and of thermodynamics, showing how all these laws spring from deep symmetries. The revolutionary result is a short but immensely rich weaving together of the fundamental ideas of physics. With his characteristic wit, erudition, and economy, Atkins sketches out how the laws of Nature can spring from very little. Or arguably from nothing at all.

Never Far Away

Asked to name a great physicist, most people would mention Newton or Einstein, Feynman or Hawking. But ask a physicist and there's no doubt that James Clerk Maxwell will be near the top of the list. Maxwell, an unassuming Victorian Scotsman, explained how we perceive colour. He uncovered the way gases behave. And, most significantly, he transformed the way physics was undertaken in his explanation of the interaction

of electricity and magnetism, revealing the nature of light and laying the groundwork for everything from Einstein's special relativity to modern electronics. Along the way, he set up one of the most enduring challenges in physics, one that has taxed the best minds ever since. 'Maxwell's demon' is a tiny but thoroughly disruptive thought experiment that suggests the second law of thermodynamics, the law that governs the flow of time itself, can be broken. This is the story of a groundbreaking scientist, a great contributor to our understanding of the way the world works, and his duplicitous demon.

Speaking all over the United States about apologetics issues, Charlie Campbell has heard just about every question skeptics have to offer. In this concise, reader-friendly handbook, he provides brief responses to the top-40 questions that keep people from the faith, such as... What evidence do you have that God exists? How do you know the Bible is actually true? What about those who have never heard of Jesus? Will they be condemned to hell? If God is so loving, why does He allow evil and suffering? How can you say Jesus is the only way to heaven? Don't all religions basically teach the same thing? Aren't a lot of churchgoers hypocrites? With a gracious introductory note to skeptical readers and a generous sprinkling of inspiring quotes throughout, this handy resource is an enjoyable read as well as a powerful evangelistic tool.

While Universal's *Dracula* and *Frankenstein* (both 1931) have received the most coverage of any of the studio's genre releases, it is the lesser known films that have long fascinated fans and historians alike. Starting with *The Last Warning*, a 1929 movie released as both a silent and a talkie, Universal provided a decade of films that entertained audiences and sometimes frustrated critics. Each of Universal's horror, science fiction and "twisted mystery" films receives an in-depth essay for each film. The focus is first on the background to the making of the movie and its place in the Universal catalog. A detailed plot synopsis with critical commentary follows. Filmographic data for the film conclude the entry. Universal's *The Shadow* short film series is covered in an appendix. Many rare illustrations and movie posters are also included.

Renowned authority on science and philosophy Dr. Ervin Laszlo explores the implications of the new quantum sciences to move beyond the of limits of reality as we know it—and find our way again in our “informed,” purposively evolving universe. Reconnecting to the Source is a powerful new book on the science of spiritual experience by Dr. Ervin Laszlo. A well-known figure in the fields of new science, consciousness, and spirituality, Dr. Laszlo has inspired some of today’s most important figures in science and philosophy. In Reconnecting to the Source he unpacks the science behind spiritual experience, investigating the ways in which we can access realms of experience beyond the everyday. It is in these moments, when our conscious minds are in contact or perhaps even overridden by our unconscious selves, that we can explore the depths of spiritual meaning. In addition to a foreword by Deepak Chopra, the book includes new, never before published contributions from a long list of well-known writers and public figures—including Jane Goodall, Barbara Marx Hubbard, Zhi-Gang Sha and many more. Each contributor has written about a unique spiritual experience of their own, sharing moments in their lives that are outside of the boundaries of the usual and reflecting on the importance of these moments. This revolutionary and powerful book will challenge you to reconsider the boundaries of our own experience and change how we look at the world around us. It is a unique, never before available resource for people who want to know how they can consciously align with the forces and “attractors” that governs the universe, and brought us, living, conscious people on the scene in the great processes of evolution that unfold here on Earth.
